## Education

---

**Yabatech College Of Technology**, April 2023 - Present

## Skills

---

**Frontend:** React.js, TypeScript, JavaScript, HTML5, CSS3, TailwindCSS.

**Backend:** Node.js, Firebase.

**Other:** Git, Vercel, Render, Agile Development, Figma.

## Professional Experience

---

### TM30 Global Limited

February 2024 - Present, Lagos, Nigeria

#### Frontend Engineer Intern:

I'm interning at TM30 Global Limited, where I'm crafting clean, responsive banking agency UIs using HTML, CSS, and React.js. I've built a static dashboard prototype that nails the design specs and sets us up for future interactivity. Along the way, I'm leveling up my JavaScript knowledge, diving into React Redux and TypeScript and pairing with senior devs in sprint planning, stand-ups, and code reviews to soak up best practices.

**Tech Stack/Skills:** React.js, TypeScript, JavaScript, HTML, CSS, TailwindCSS, Communication, Figma

### Yaba College of Tech. (Academic Projects)

April 2024 - February 2025, Lagos, Nigeria

#### Frontend Engineer:

I served as the Frontend Lead on multiple capstone projects, most notably a mobile-first React Biometric Attendance System that integrated Firebase and an Arduino fingerprint scanner, as well as a Python/OpenCV-powered OCR Vehicle Verification System. I focused on creating clean and responsive interfaces, ensuring robust API connections, optimized data handling and storage with Firebase, and maintaining accessibility and performance standards. While collaborating closely with my classmates, I also led design reviews, documentation efforts, and presentations to academic panels.

**Tech Stack/Skills:** React.js, Node.js, JavaScript, Python, Firebase, TailwindCSS, Communication, Express.js.

## **Upwork**

March 2022 - March 2023, Lagos, Nigeria

### **Freelancer:**

I've teamed up with Upwork clients to turn design mockups into fast, responsive sites using HTML, CSS, and vanilla JS. I build clean, accessible layouts across all browsers, add UX extras like sliders, modals, and live form validation, and speed things up with asset trimming and lazy-loading. Throughout, I keep requirements on point and deadlines met with clear messaging and video calls.

**Tech Stack/Skills:** HTML, CSS, JavaScript, Communication.
